XML And Its Uses

by Jim Costin

Web sites are created using HTML (hypertext markup language). XML is a newer version of this formatting tool. Come and see how it works and why you should care.

Understanding, Choosing and Purchasing a Digital Camcorder

by Beverly Levine Smallwood

I have been researching digital camcorders for a while now and thought I'd share some web sites with you. These sites will help you understand how a camcorder works and what the various features are, so you can weigh their importance to your intended use. Some features are very important and others less so. Some features can greatly increase the cost of the unit.

Camcorder Controls Defined <http://www.chaminade.org/MIS/Tutorials/CamcorderControls.htm> is a list of the various features a camcorder might have with a description of its purpose. Print this page out and use it as a glossary.

How Buying a Camcorder Works by Tom Harris <http://www.howstuffworks.com/camcorder.htm> awkwardly titled, but excellently presented, information about camcorders. It traces the development of the camcorder from the beginning to the present, and describes how it works. Along the way you'll learn about the relative importance of various features. Included is a features chart with descriptions of the feature along with comments on its utility. For instance, image stabilization comes in three flavors: electronic, digital and optical. Which is better? Which costs more? What are the tradeoffs? There is also a feature comparison chart in pdf format that you can download. Think of it as a shopping checklist to work through.

By now you should be vaguely familiar with the terminology and have formed some ideas about what features you want. From the How Stuff Works site above, click on "Shop or Compare Prices" and you'll go to <http://www.dealtime.com> with camcorders displayed. This site allows you to sift through the offerings by selecting specific features, brands, and price ranges. Use the pdf comparison chart to make notes about the models you think you might be interested in.

What'sTheBest.net has eleven tuto-

rials on features, formats and buying tips. Go to <http://www.whats-the-best-camcorder.com/> and click on "Buying Guide".

Speaking of formats, do you know the ins and outs of 8MM, Hi8, D8, VHS, S-VHS, and mini DV? Video Tape Challenge: A Quality Comparison of Video Formats <http://www.picturebox.com/format.html> seeks to answer the age old question of which format is the best.

Circuit City has a nice set of pages discussing basics and features, along with a glossary. Go to their main page <http://www.circuitcity.com/> then look to the left side of the screen and click on or hover over "TV Video & Camcorders" then do the same to select "Camcorders". Once there, you will see a "Learn About" section in the left hand column.

The Active Sales Assistant at <http://www.activebuyersguide.com/> can help you narrow down the models you might be interested in. Click on "Camcorders" under "Electronics" then choose a search method. All three methods really work at making you define what features are important to you and how much you are willing to spend to get them. At the end, you'll be presented with a list of camcorders that fit your selections. From there you can check on two or three or four at a time and get side by side comparisons.

Still hungry for information? Try

the Camcorder Buyers Guide at <http://www.unbeatable.com/products/camcorders/CAMCOInfo.htm> or c/net Electronics <http://electronics.cnet.com/> where you'll find reviews and a buying guide. I also like their shopping pages <http://shopper.cnet.com/> where you can read reviews, features lists, and user comments. Clicking on "Where to Buy" or "Check Latest Prices" will bring up a list of e-tailers with prices, shipping charges, phone numbers, web sites and the like. You can even sort it by price or merchant name.

You've spent a lot of time deciding what you want to buy, but where should you get it? I tend to fret about ordering from someone I've never heard of before. Where can you learn more about the merchant? Try out the "Store Rating Guide" at <http://www.bizrate.com/>. This is feedback from consumers about their buying experiences. I found that some of the e-tailers quoting the lowest prices had a lot of complaints against them including bait and switch, sales people calling and pushing them to add on expensive accessories, bad or no customer service, gray market items, opened merchandise, lost shipments, and worse. I like to balance peace of mind against price when choosing a merchant. BizRate helped me select a merchant that I could feel safe ordering from.

My camcorder arrived today. Now I need to learn how to use it!

President's Letter

Hello all.

I'm really looking forward to Ed's talk. As many of you know, I've been intending to convert all our old (some 60 years old) home movies into digital format, so I can't wait. Many of you may be unable to attend, intending to attend Dr. Schweitzer's lectures in Wilmette, so we may have something similar later in the year. I guess that would depend upon how adept I get at it and whether there is an interest.

I recently received an email from a former student, Julie Pecho, about an Oprah Winfrey show. I was able to catch it on the late night re-run. Thanks, Julie!

Oprah featured "Our Big American Family with Billy Crystal and Dr. Maya Angelou" on January 30th. It was a funny and often touching look at what our family history can mean to us. Both of the guests are featured in a new exhibit at the Museum of Tolerance in Los Angeles called "*Finding our Families; Finding Ourselves*" which will open February 10th. They talked about how they came to be interested in their family history and a bit of family stories. Actual research was performed by professional genealogists. Viewers were strongly encouraged to get in touch with their pasts, especially through older family members. No hard core genealogy was discussed, but Oprah referred viewers to her web site for tips on getting started.

The show page has photos and video linked http://www.oprah.com/tows/pastshows/200301/tows_past_20030130.jhtml?promocode=037 and includes a link at the bottom of the page to her "how-to get started" page. Be sure to click also on the link at the top of the page to "After the Show" for a video of some interesting stories that were broadcast on her "After the Show" program on the Oxygen network.

Question. Will Oprah be as big an influence as Alex Haley in getting people interested in their roots?

See you soon,

Beverly Levine Smallwood

Archival Binders Available

Do you have copies of family documents in binders of various shapes, sizes, and colors? I do. Despite the fact that the copies themselves are in document protectors, the binders still get dusty. And they're a pretty motley looking collection as well.

To enhance the preservation (and the looks) of my collection, I'm exploring putting them either in archival binders with slip-covers, or in archival "clamshell" box type binders that completely enclose the contents. I've found a number of websites where these are advertised (see below).

<http://www.helixphoto.com/Darkroom/Display-Storage/century/century.html>

<http://www.lightimpressionsdirect.com/>

<http://store.yahoo.com/archivalusa/info.html>

They're not inexpensive (\$20-50 per box or set), but some dealers offer discounts when they're bought in large quantities. I'll bring samples to the next couple of meetings. If anyone wants to order some along with me, we should be able to shave several dollars off the cost.

Some CAGG-NI History and Stats

Blowing Our Own Horn

By Anne Jacobs

Recently, I got an e-mail from a member who received a query from the CAGG-NI mailbox on one of their surnames listed on our website. She was very excited as she had diligently been researching this surname without making a connection. This unsolicited e-mail communicated how much she appreciated having received this query and the great connection which has really helped. Without CAGG-NI's website, she would not have had an Internet presence. At the end of the e-mail, she said I could use the e-mail as I wished. This gave me the idea of using it as the basis for a column.

For our newer members, CAGG-NI has collected member's surnames. At first this was going to be collected into a card file similar to the file maintained by the Ohio Genealogical Society. As a matter of fact, it was going to be submitted to this "master file" to increase the possibility of making connections. This was in the days prior to our website; as a matter of fact, it was in the days of Northern Illinois PAF (Personal Ancestral File) Users Group, which is the organization which preceded CAGG-NI.

Once the website was contemplated, designed and published, there was no better place to make contacts than the Internet. So a surname page (or series of pages) were created. To protect membership's identity and eliminate the need to put member's personal name on the Internet, a membership number system was developed. Each membership has a unique Member ID. Now a member's surnames could be put on the Internet with some anonymity. To prevent exposure of individual e-mail addresses to the harvesting and receipt of spam only CAGG-NI's e-mail address was used.

Now, for the horn blowing. The website has grown from a simple presence, (mainly because any organization, whose name begins with Computer-Assisted, has to have a website or hide its head in shame) to a large, informative, well-organized and professionally presented site. **Gerry Czadowski**, our Webmaster, has moved the site from its infancy to a mature full featured site. A recently-added search facility can pinpoint pages which contain specific content. Recently, some new research-assisting features have been added. **Bev Smallwood**, our President, has developed the "Day Trippers

Guide to Local Libraries" and her census PDF forms.

Since the beginning of the website, we have had over 10,000 unique visitors. The website has held over 1600 surname entries which include surname migrations (i.e. Jones moves from England to New York to Illinois at different timeframes). At least 112 queries have been received and forwarded to 68 members. Two members top the list receiving 7 queries each.

Come join the fun. Submit your surnames including locations and timeframes for each location. For the most part, queries have been received for those surname entries which are more detailed and therefore more likely to be a connection. As this process has been automated (after the initial data entry), there is no longer a limit on surname entries.

Help make the site even more useful by checking out your local library. If the site does not include details on the library, help to improve it by adding your library and its details. There is a "How to Contribute" explanation on the site.

In conclusion, you are a part of this effort. You can take pride in what has been already done but it could be better with your help.

Surname pages

o Submit your research surnames, if you have not already.

o If you have already submitted, update what is there. If you have not added locations and timeframes, do it now. If you have been lucky enough to extend your tree to another location, submit it to the website. You can click on your Member ID at the right of your surname entry, enter your updates and send the e-mail. It will be added to our records and also be included in the next update to the surname pages.

Library pages

o Use these pages as an aid to your research.

o Show it to others suggesting that it might help them locate resources for their research. Word of mouth is the best form of advertising and you may find these fellow researchers as new members.

o Check your local library's page. If it is not listed, tell us to add it by using the e-mail link on the library pages giving your library's name, address and hours as a mini-

mum. If it is listed, review what has been already submitted suggesting any improvements, corrections or additions. If you know of holdings which do not fit into a listed category, suggest adding the category and list the holdings.

o Check to see if your local community's historical society is listed. Submit it for inclusion.

Site Improvement

o If you notice a problem with a link or a page, let our Webmaster know by using the Contact CAGG-NI link to send an e-mail.

o Suggest sites which you feel should be included on our links pages. If another site does something better than we, let us know so we can evaluate it.

o Offer suggestions of new interesting/helpful content. Bev Smallwood requested a Genealogy Groups page containing links to these organization pages. It has been added so now you have one location to check on your national or local societies. Check it out.

The site will only improve with feedback.

CAGG-NI Shopping Days

Our requested shopping days are as follows, unless changed by them:

Dominicks: March 24, 25, 26
July 21, 22, 23 November 25, 26, 27

Jewel: June 30, July 1, 2 August 25, 26, 27 October 27, 28, 29

The slips are available from Jewel about 3 weeks before the days at the Roselle Road Jewel. The Dominicks master form is mailed to Bev.

CAGG-NI Member Goes International

Mike Karsen's talk "*Write Your Family History NOW!*" has been accepted for the International Conference on Jewish Genealogy this July in Washington, D.C. This one night course is being taught at Prospect High School on Wednesday, March 12th from 7 to 9 p.m. The fee is \$16 and you may call District 214 to register for class 5542 at (847) 718-7700. Mike is also teaching this course for District 211 on Monday, March 10th. You may review their catalog at <http://www.d211.org/>. He's on page 37. For more information you can contact mike at MikeFamHistorian@aol.com.

What?

Ever get lost in the high-tech acronyms? Reading messages containing things like IMHO, BTW, or LOL? You'll see these more often in chat rooms and technical mail lists, but they could crop up anywhere. Here's a site that gives you the translations into simple English: http://www.webopedia.com/quick_ref/textmessageabbreviations.asp

DNA Testing

Those of you working on a one-name study or other large project may be considering initiating a DNA study. Megan Smolenyak Smolenyak discusses some considerations other than cost in "DNA Testing: Why Markers Matter", published originally in *Ancestry Daily News* of January 30, 2003. If you missed it, you may read it online at <http://www.ancestry.com/library/view/news/articles/6806.asp>.

January Meeting Notes

By Marilyn Alton

Using a Handheld PDA for Genealogy

The January program was presented by **Everett L. Butler**. The program was a PowerPoint slide presentation demonstrating his genealogy files on his PDA. (PDA stands for Personal Digital Assistant or Appliance). He had all his data including names, addresses, birth, marriage, death, cemetery information and his list of research to do.

Every PDA has 4 buttons which are calendar, date book, telephone and todo tasks. Entry into your computer can be sync (synchronized) with your PDA. This is done by putting the PDA into its cradle and plugging this into your computer. So you only have to enter anything once. Synchronization can be either way, PDA to computer or computer to PDA.

Everett mentioned many software tools he has on this PDA. Software packages cost anywhere from \$5.00 to \$100.00 generally speaking with many very useful applications being in the \$20.00 to \$30.00 range. Everett's PDA also contains his personal and business calendar with the dates, names, places, directions, times and any other in-

formation he might need to get the job done in his personal/business life. Some of the software he mentioned is SmartList ToGo, Documents ToGo, Gen2Do, GenRes (Genealogy Research).

Everett created a cemetery extraction format using SmartList ToGo which can be used to record data as you are visiting a cemetery. If you purchase a PDA with an infrared facility and this software, Everett has promised that he can beam this format to your PDA so you can use it also.

While listening to his presentation, I had two thoughts continually going thru my mind. The PDA's size is so convenient to take with you while doing research. It fits in your briefcase, coat or shirt pocket and a purse. A portable (laptop) computer is great to take with you, but the size and price of the PDA sounds better. The PDA has all the capabilities you need to accomplish your tasks while doing your research.

Many of us have been interested in owning a PDA but may not have been convinced of the capacity for our genealogy. The cost now is reasonable being in the \$200+ range.

Take your PDA to all your libraries, research centers and cemeteries. PDA's are becoming a common tool for genealogy researchers. What a wonderful time and task management tool! One question you will want to answer prior to choosing your PDA

genealogy software is whether you want to be able to update the data on the PDA. Everett decided that he wanted the data flow to only go TO his PDA and not back to his laptop.

PDAs have now matured into a part of a system instead of a device isolated from your other electronic tools. Capitalizing on this new trend, Ancestral Quest®, a genealogy program for desktops and laptops, has added a Collaboration Database facility which provides many people the ability to join their research with others researching the same lines. The database is available on-line with control of who can find and view it controlled by the manager of the database. This genealogy information can be moved from your larger computer, thru the format of GEDCOM, onto your PDA.

Everett mentioned there are many different brands available. If you are thinking of purchasing one, be sure to check various brands to find the right one for you. Think about what you will use it for and purchase the one which answers your personal needs.

Thanks, Everett, for a great and very informative program.

Surfing The Net Using AOL

By Anne Jacobs

Many of our members use AOL (AmericaOnline) as their Internet Service Provider (ISP). Due to a recent tutoring experience, I was able to learn something about AOL and the Internet. As a result of that and many questions and comments by AOL user/members over the years, I realized that this might be a useful article for members who use AOL. There are different versions of AOL which are available and this article does not address all versions. As I am not an AOL user, there are no screen captures accompanying this article. Some features in your version of AOL may work differently than stated here. However, conceptually, it should be the same.

AOL's method of accessing the Internet outside the AOL world can be less than obvious to some users. AOL uses keywords to navigate within its own site.

After getting to your AOL home page, there is a rectangular white space towards the top of the screen into which you enter keywords. Navigating the Internet occurs by keying an URL (Universal Resource Locator or web address) into the same place. On other versions, clicking on an icon/menu item on the toolbar for the "Internet," brings up a search engine or a browser window where you can key in your URL. By entering an URL into this area and clicking GO, AOL's service will take you to the requested site. Maximizing this Internet screen will fill the screen portion that AOL allocates minimizing the amount of scrolling you need to do to see the entire web page.

You may have problems access-

ing some Internet pages, just as you would with any other browser. Not all web sites are created and tested using different browsers. **Gerry Czadowski**, CAGG-NI's Webmaster, has kept this in mind for our site and tested using different browsers and different release versions of various browsers. (I keep an old version of Netscape (version 4.72) so I can test new pages using this software.)

There are two things you may do: change the appearance of the AOL screen or use a different browser. One thing you can do is reduce the amount of space the toolbar takes up. Go to "Preferences" which can be found under "Settings". If you select "text only" rather than "text and icons" for your toolbar preferences, you can reduce the toolbar space by as much as a third. This same change may also be made to Internet Explorer and Netscape screens. This further maximizes the amount of screen space available to display Internet pages.

Another method is to use a different browser. You pay AOL for access to the Internet; so you have to sign on using it. After connecting, minimize the AOL screen as you would with any other window, by clicking on the box in the upper right hand corner with the underline (_). Next, click on the Internet Explorer (IE) or Netscape icon on your desktop or select it from your Start>>Programs list. You have already established connection to the Internet with AOL and it still exists because you have not terminated the program/connection. By starting a browser, you are simply starting a different program to view web sites. After the browser starts up, key any

URLs into the same type of white rectangle at the top of the screen, usually labeled Location or Address and hit Enter.

You may find surfing the Internet more enjoyable by eliminating AOL from the Internet equation. When you bring up Internet Explorer or Netscape, its home page will be MSN or Netscape's web site. I have a search engine as my home page. You can change your home page by selecting another site and setting the browser to go to that as your home page. In Netscape, go to Edit>>Preferences>>Navigator and key in your desired home page in the slot marked Home. In Internet Explorer, setting your home page is found in Tools>>Internet Options. After completing this setup, that page will come up when you start the browser or when you click on the Home icon. To make CAGG-NI your homepage, key in <http://www.rootsweb.com/~ilcaggni> into the supplied slot. ;>)

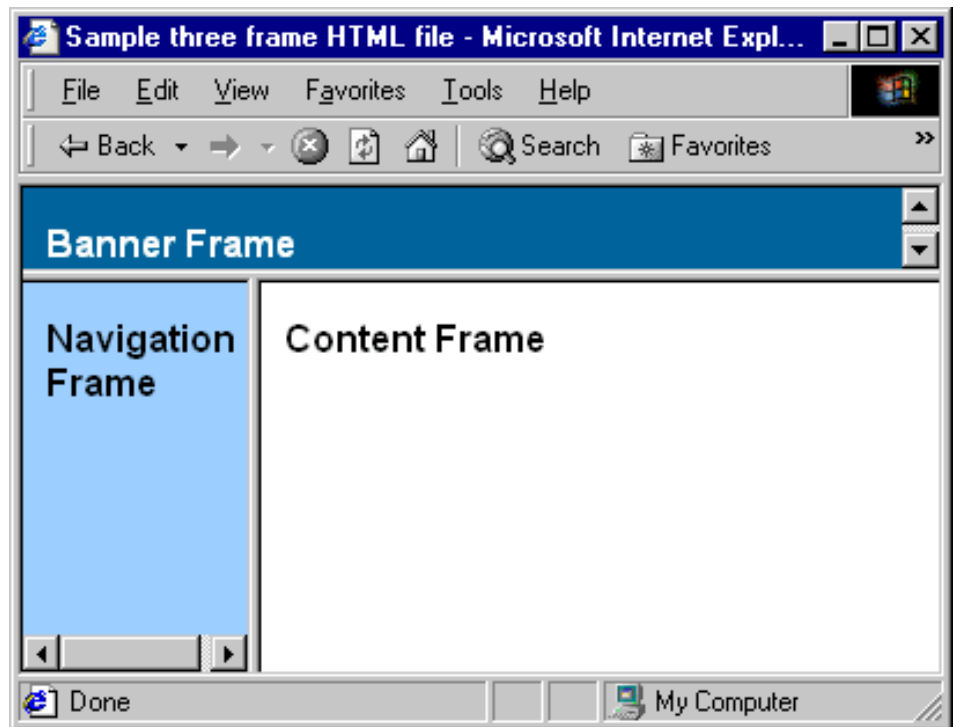

Some comments I have heard from ex-AOL users who have selected another ISP for their Internet connection and have been forced to start using another browser are: "There is a whole new world out there that I never knew about" and "I never saw so many sites". Try it. You may agree. If it works, you have a new surfing method. If you don't like it, you still have AOL.

Web Sites Utilizing Frames Can Be A Challenge *By Anne Jacobs*

The impetus for the article on Surfing the 'Net using AOL, was that an AOL User had difficulty accessing a site using frames, FamilySearch.org. Some elements (Next and Back buttons) were not displayed on her screen when viewing some lessons she wanted to take. These buttons were the only way to navigate through the lessons. Her solution was to use Internet Explorer when accessing this site. With the setup of her AOL page, some of the site was not displayed and no scroll was displayed for that portion of the site. However, the default settings of IE were different and displayed more of the site.

You know you are on a site which uses frames if the entire screen does NOT move when you use the scroll bar to page down the site. Part of the screen viewed remains unmoved. The left-hand side of these pages do not move when using the right-hand scroll bar.

If you see that you have problems with a site, you can try using another browser to see if that solves the problem. In the particular case mentioned above, testing the same site on a different computer resulted in the same result occurring using

AOL, Internet Explorer and Netscape. The browser settings, screen resolution, etc. were different than the original computer. However, another solution is to try to scroll the unmoving section of the screen by dragging with the cursor at the very top or bottom depressing the right mouse button. The unmoving portion may scroll, even though no scroll bar is presented. This is a solution but not a very desirable one as the movement is slow

and difficult. But it may work.

Another trick I have used when viewing a framed page is to open up the part of interest in a new window. This is done by using the right mouse button while positioned in the desired frame. Depressing it opens up a menu which contains "Open frame in a new window". Select this choice and you will see only that frame. Now you have two windows open. When you close the window, you will be back where you started.

About the CAGGNIMembers Group at Yahoo!

As part of CAGG-NI's ongoing effort to be of better service to its members, a Yahoo Group called CAGGNIMembers has been established. CAGG-NI will use this group for the following:

- Automatic notice of meetings and other events
- Distribution of the newsletter (and access to the archive of recent issues).
- Communication for sharing of new found resources.

The CAGGNIMembers group is a limited access forum, it can be joined by invitation only. After receiving the invitation to join the group, you have a limited number of days to accept the membership and join the group.
