

TMG

More on changes and new options in version 5.11

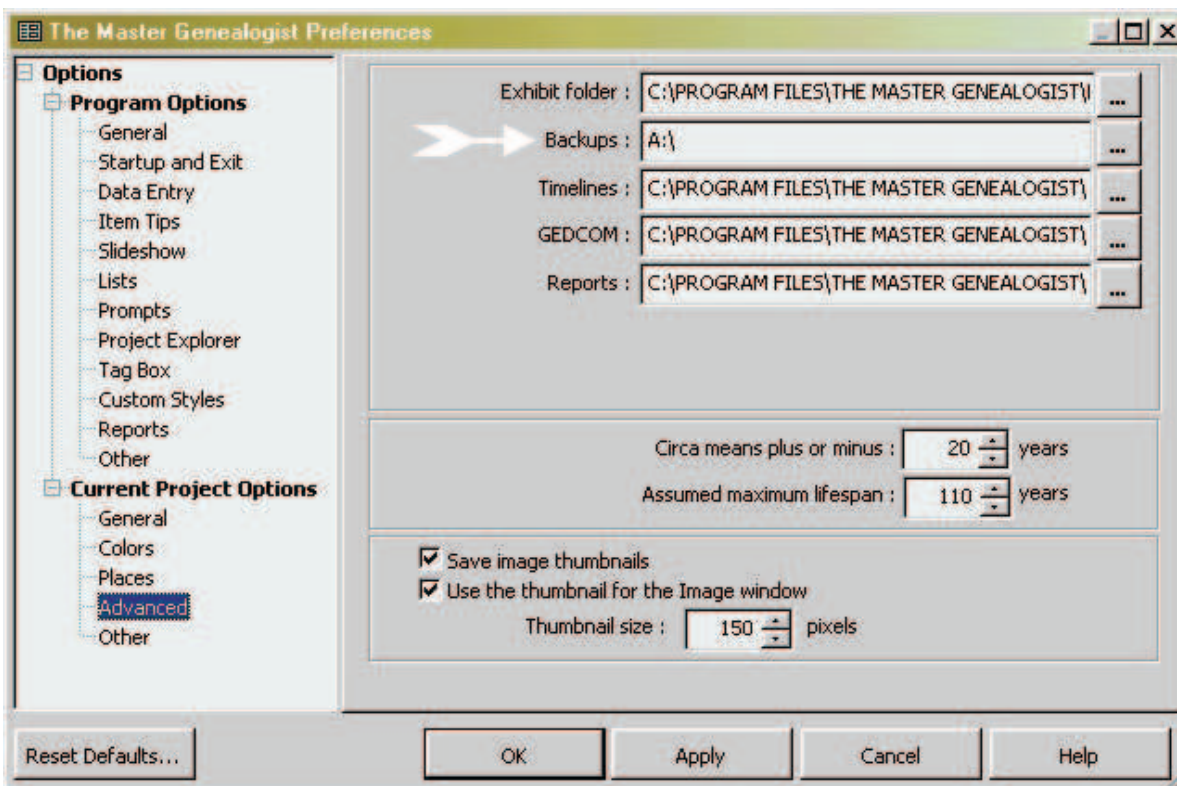

★ Don't uninstall version 4 just yet

Your family data probably imported to version 5 just fine. But be sure you look up any report DEFINITIONS in the old version and RECREATE them in the new.

★ Backup Layouts and Report definitions

Be sure to frequently backup the data in your project. See **File > Preferences: Program Options/Startup and Exit** for backup prompt and loop cycle and **Current Project Options/Advanced** for backup disk location. The backups will still be to .sqz files, so be sure you can tell them from your version 4 backups.

In the same place you may want to backup any layouts or report definitions you want to save. If you've installed TMG to the default folder, you will find layouts *.lo in C:\Program Files\The Master Genealogist\. Report definitions will be *.rpt in C:\...\Reports\. Just copy these files to a backup disk. To restore, simply move them back into these folders with TMG.

★ Custom Toolbar

View > Toolbars > Customize ... will bring you to the window to create (or add to) a custom toolbar in TMG. You have all the options in all the menus to choose from. You can use the TMG buttons provided or create ones of your own. Once you've added your favorite reports, tools and edits, place this custom toolbar where you find it most handy. Then you must SAVE the resulting layout to have the toolbar present the next time you want it.
