## *Many Windows in The Master Genealogist*

### ★ Seven layout windows for your work area

The standard layout comes with TMG and shows the **Details** window (with Person, Family and Tree views) plus the **Children** and **Siblings** windows. This standard layout cannot be updated, but you can create custom layouts and save them under a new name.

### ★ Window Menu and Layout Toolbar

The standard layout includes the above Layout Toolbar with icons for each of the seven windows. The rest of the windows are: **Project Explorer**, **Flags**, **Image** and **Focus Group**. The same options are in the Window Menu. Once you open any window, you can drag it into place and resize just like any other window, however, resizing can affect font size in some cases. You can manage your layouts in the toolbar, or through the View Menu. All these terms are indexed in the TMG Help and are easy to find.

### ★ Add Person Windows

The default Add Person windows (Father, Mother, Daughter, Son, etc.) contain space to enter name, birth and death information and one citation. Memo fields are not included, but sureties are present for each line of data. Add Spouse (Husband/Wife) windows also include room for the marriage information. These windows can be changed to also include tags you frequently add at the time you enter a new person through the Setup button. Flags can be added in this way as well.

### ★ Editing Text in a Memo Field

Tag Entry windows, text fields in sources and repositories now have a “right-click” menu with many edit options. This is so much easier than the methods in version 4 and with many new choices.

This is a good reminder that TMG v5.11 has many quick and easy to use “right-click” menus in all the many windows. Each place you use it will have a different list in the menu. Check the Help or the User’s Guide and whenever in a hurry, just click your right mouse button to see what is there!
