Seminar Topics

Genealogy – The Future Is Now

Do you have trouble keeping up with technology, especially programs, apps and websites that other genealogists seem to be using these days? You are not alone. After a quick review of how much has changed in the past 30 years, you 'll learn what is hot, what is "now" and how to prepare for the genealogy technology of the future.

Google for Genealogists

Google is more than just a search engine – it is a wealth of information, much of which goes unnoticed by the average genealogist. Besides search, Google allows you to access maps, books, journals, abstracts, patents and much more. These components may be what is needed to make advances in your genealogy research.

Social Networking: New Horizons For Genealogists

Did you know that the over 55 crowd is the fastest growing group of FaceBook users? Did you know that Twitter is not the domain of the much younger "texting" crowd but is used by an older, more savvy group of people? Did you ever wonder how and if these programs, along with others such as blogs and wikis, can be used to help genealogists? Wonder no more as we explore what makes up the oft-mystifying term "social networking" and how each program is currently being used by genealogists and family historians of all ages.

After You 're Gone: Future Proofing Your Genealogy Research.

Have you ever considered what will happen to your years of genealogy research once you are gone? Learn how to ensure that your hard work carries on. Through a combination of planning, common sense, and new technologies, we 'll review how to create an action plan for preserving your genealogy research.
