Search techniques used to obtain confirmation results can be applied to any country. Comparing the ages of people found in the census to the information I already had helped me locate information I did not have: Like the name of my great-grandfather's mother and the place that he was born. Then locating his birth record became easy. At times when searching data bases the less information you put in gives you better results, but it may take you longer to search the results. Contrary to what we might think, our ancestors moved to different towns and countries. They went where there was work.

Posting your family tree on line with MyHeritage, Ancestry, FamilySearch, or any other online genealogy social networking company can help your research expand and link you up with distant relatives who share the same interest in genealogy.
